# How EROAD can build a safer, Chain of Responsibility compliant, driving culture for your fleet.

Nurturing a safe driving culture within your organisation is fundamental to your Chain of Responsibility compliance.

EROAD's intelligent fleet management software can help by monitoring driver behavior and combining big data and insights to continually improve your drivers' awareness and skills.

HERE'S HOW IT WORKS:

EROAD's in-vehicle **Ehubo2** device captures essential information in real-time on each of your driver's as they conduct their daily driving duties.

It can provide real-time coaching feedback to remedy any issues such as harsh braking or speeding immediately, as it happens

The data is also available on EROAD's desktop fleet management and reporting portal – **Depot** so you can keep track of all activity.

Download reports and discuss real events and how to improve with your drivers as you go

EROAD's Leaderboard also allows you to compare your drivers with other fleets and vehicles in the EROAD network to also drive a culture of accountability and safety.

This allows you to reward drivers for performance or changes in behaviour and also create healthy competition within your fleet to being a safer organisation.
