

# How EROAD's Electronic FBT Logbook can save on your fleet's FBT

**EROAD's electronic FBT Logbook can save your fleet time and money.**

## HERE'S HOW IT WORKS:

1

Drivers enter a passcode when they get in the vehicle, which enables time and distance to be automatically recorded against their name.

2

The driver also selects the purpose of their trip – either business or personal – which is then stored in the telematics platform.

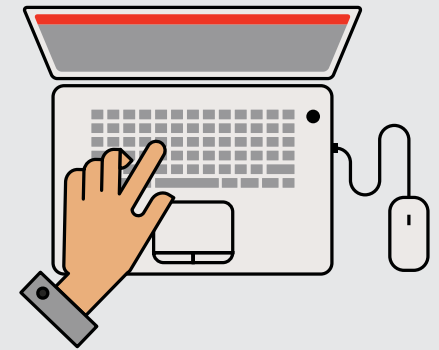

3

Data is captured in real-time on EROAD's single in-cab device – [Ehubo2](#)

4

Once the trip is complete, it is recorded and stored for the requisite period and is quick to recall and audit, when needed.

5

The system can clearly establish the split between work and private use over any three-month period to help minimise your FBT liability.
