

# How to **unlock the maximum FTC rebate** for your business

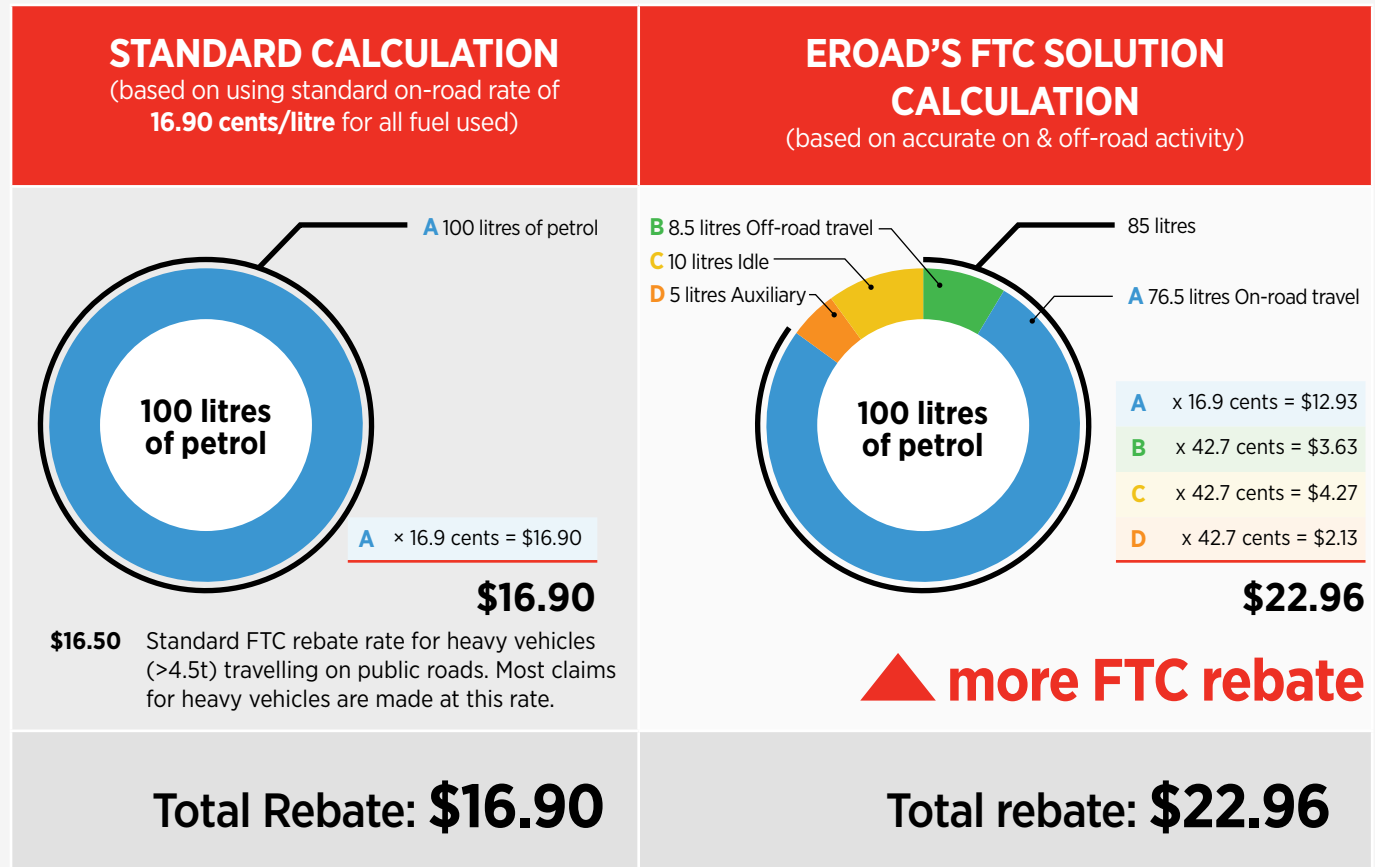

**EROAD**

Despite more than \$12 billion being claimed in FTC each year in Australia, it's estimated many businesses are still under-claiming on their FTC rebates.

This is because many are either unaware of their full entitlement or don't have the necessary resources to capture the right FTC claim information. Instead, they just use average percentages - which only provides for a 'minimal' rebate.

This table shows the difference between a calculation of the standard FTC rate verses using EROAD's FTC Solution to maximise their rebate.

**By using accurate data to capture and claim the right fuel for the right use and location, this business could potentially claim more FTC per 100 litres than by just using the standard on-road calculation rate.**
